

TransactionDesk Release

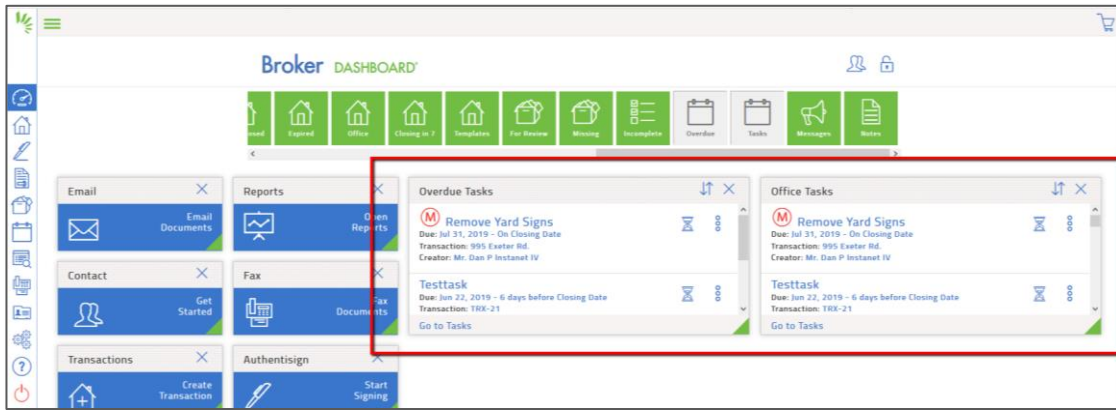

LONE WOLF
TECHNOLOGIES

lwolf.com
1.866.CRY.WOLF(279.9653)

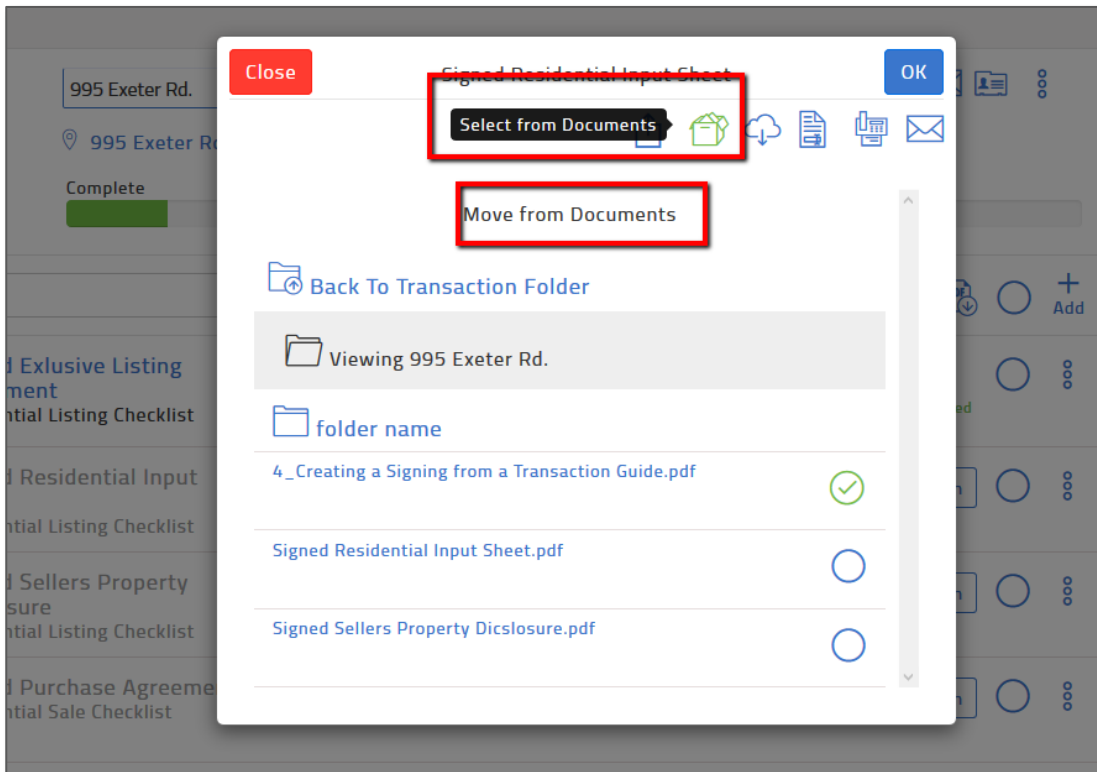

1. **Ability to use multi-page previewer when accessing document from Review Document notification.** Users can now leverage the continuous scroll feature from the review notification emails.

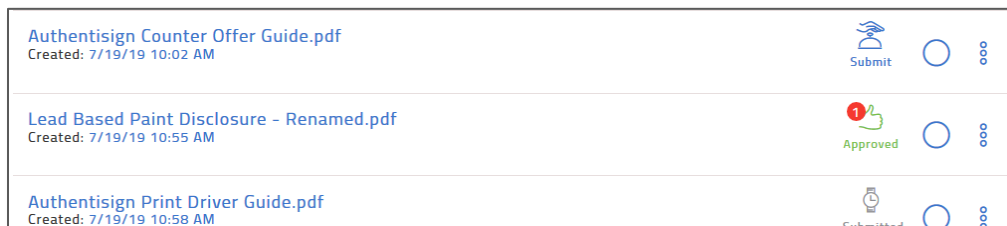

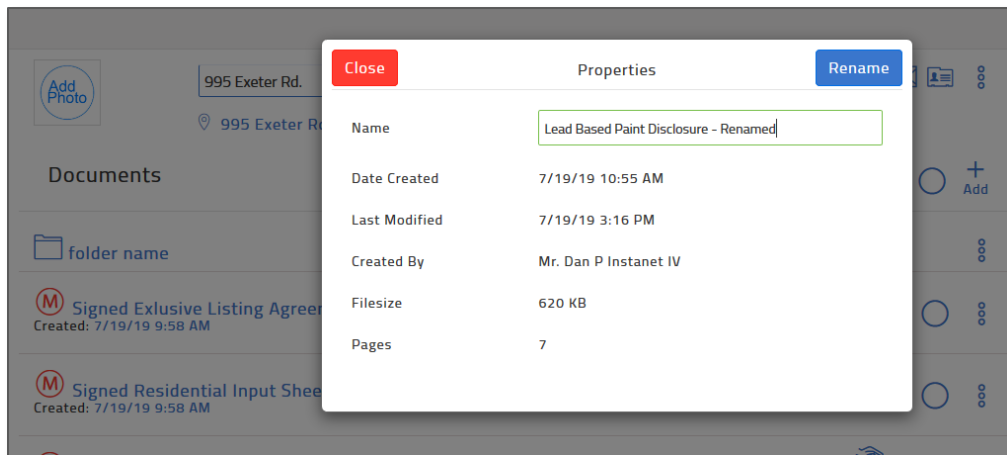

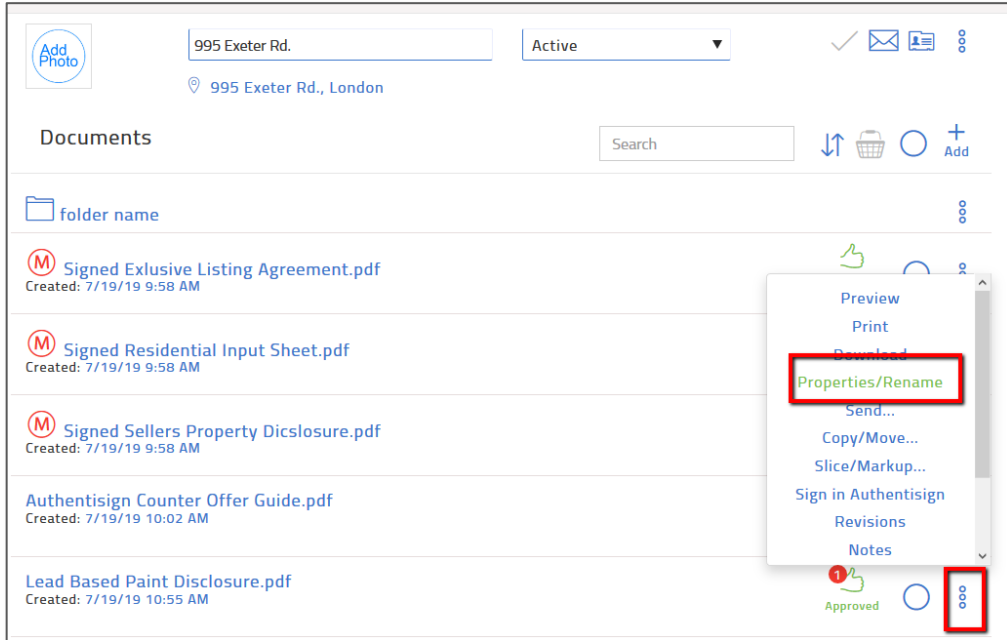

- 2. Improved performance behind the task widgets, improving load time of *Overdue Tasks* and *Office Tasks*.

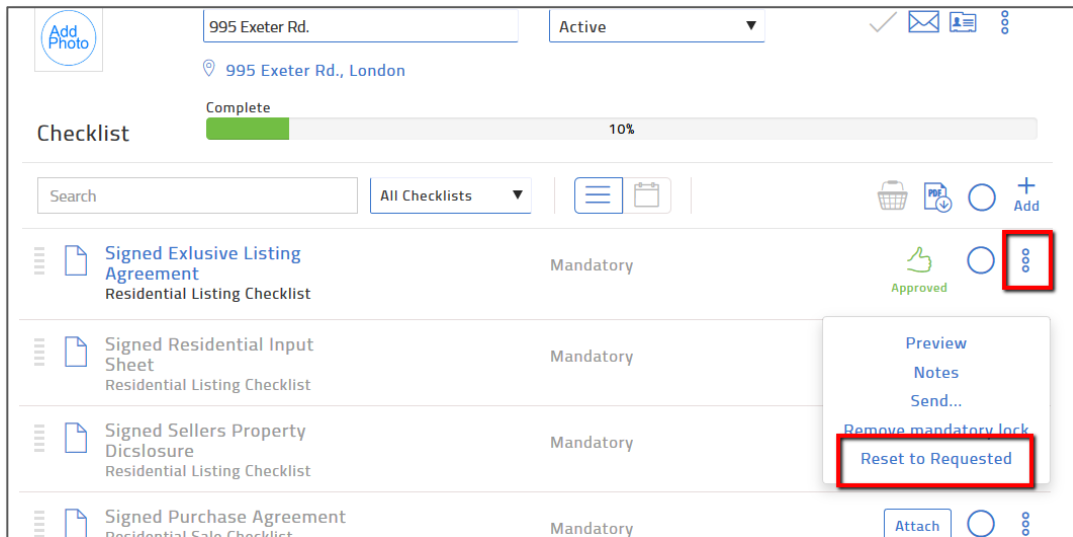

- 3. Updated screen text for attaching a document or submitting a review to a checklist item

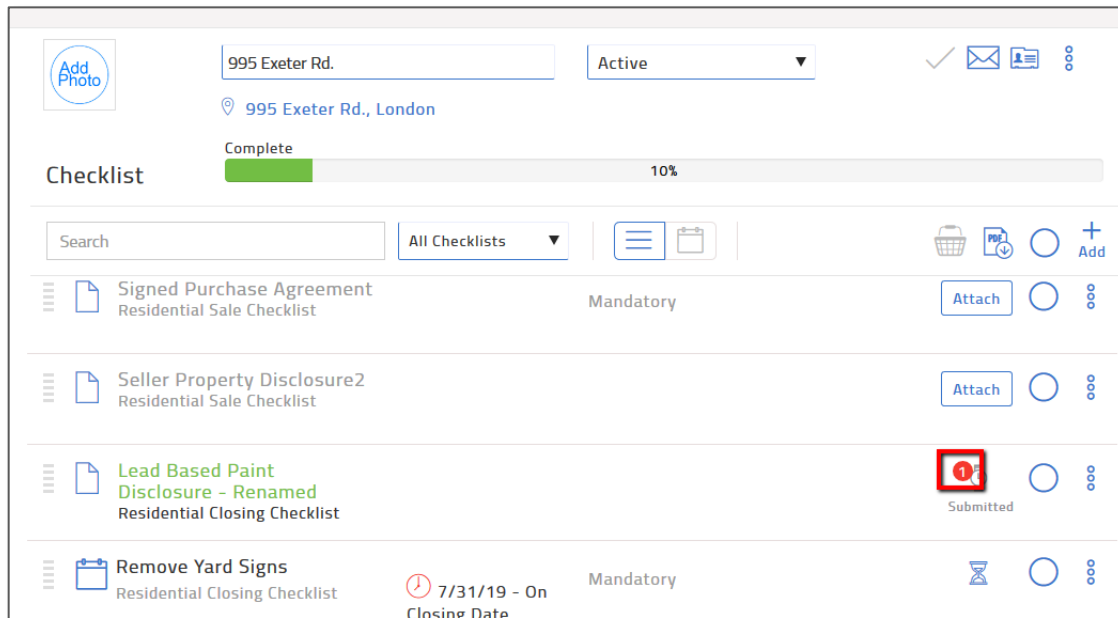

4. **Ability for Super User to rename a submitted or approved document.** This allows Super Users to rename documents after they have been submitted/approved. Renaming remains restricted for mandatory items so those checklist item names can never change.

5. Added ability for a Super User to reset fully approved document from the Checklist tab and Broker Review - Change 'reset' to "Reset to Requested"

6. Update the note icon to be a badge indicator instead of a paper sheet icon. (The badge number determines how many notes are in the document).

BUG FIXES

- Fax no longer displaying negative fax durations
- An error is no longer produced when attempting to upload a document to the cloud and select one drive
- Duplicate transactions will no longer appear when displaying transaction search results
- Error no longer generated when printing an excel sheet from Document Preview
- When using the form editor on an android device, the form editor tool belt will not be pushed out of view
- Now have the ability to copy and move forms to checklist items within a transaction
- Long running searches no longer occurring when filtering Document Review by All Offices
- Error no longer generating when populating broker review list on the dashboard
