

TransactionDesk Release Notes: **19.15.00**

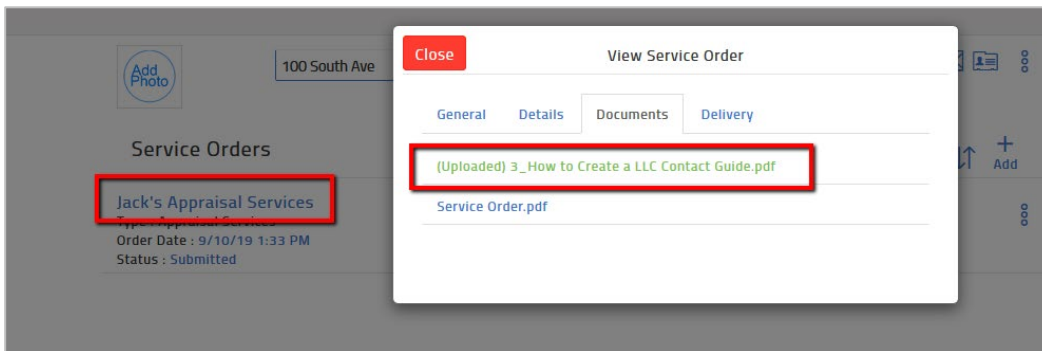

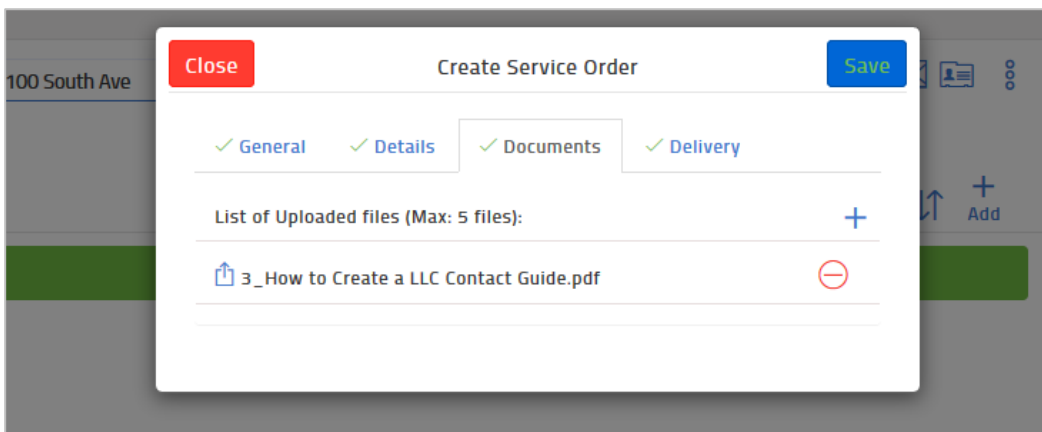

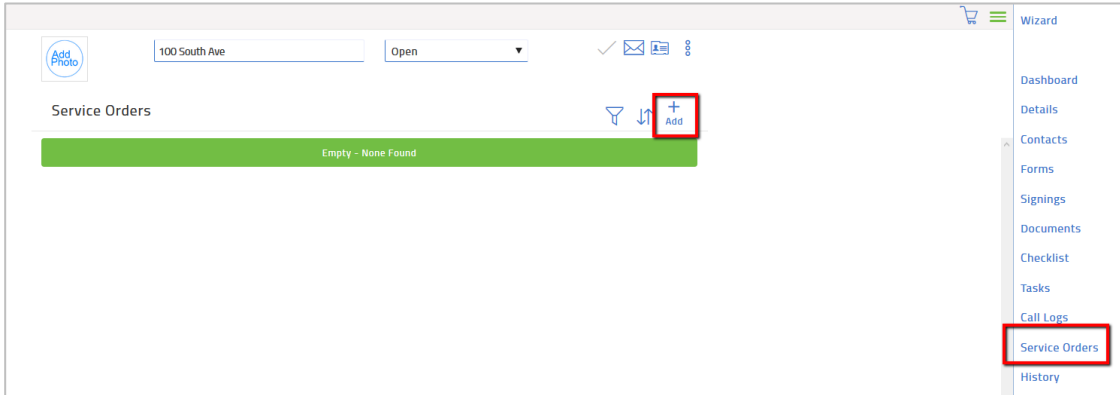

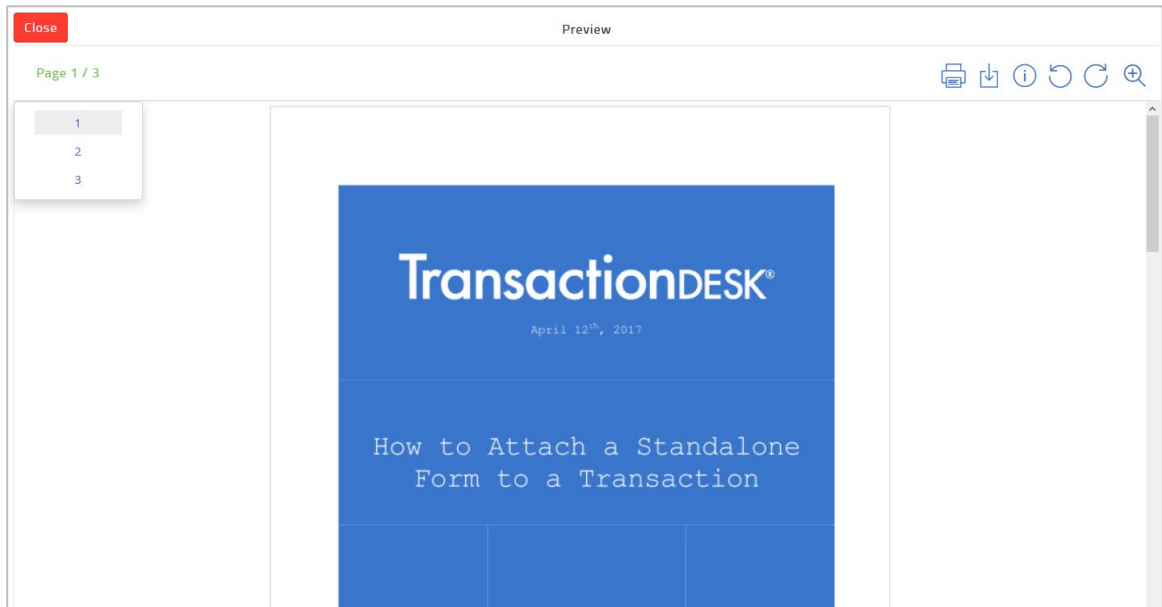

LONE WOLF
TECHNOLOGIES

lwolf.com
1.866.CRY.WOLF(279.9653)

1. Apply new multi-page previewer to Service Order documents.

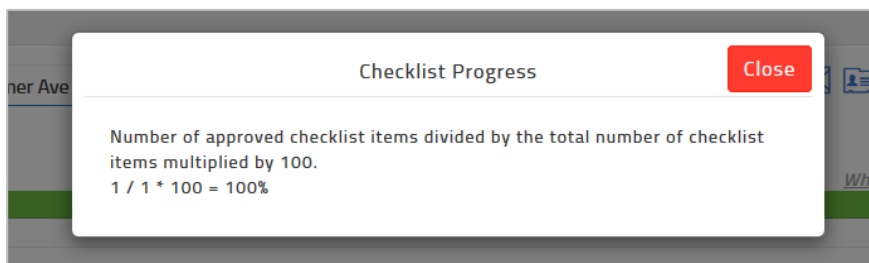

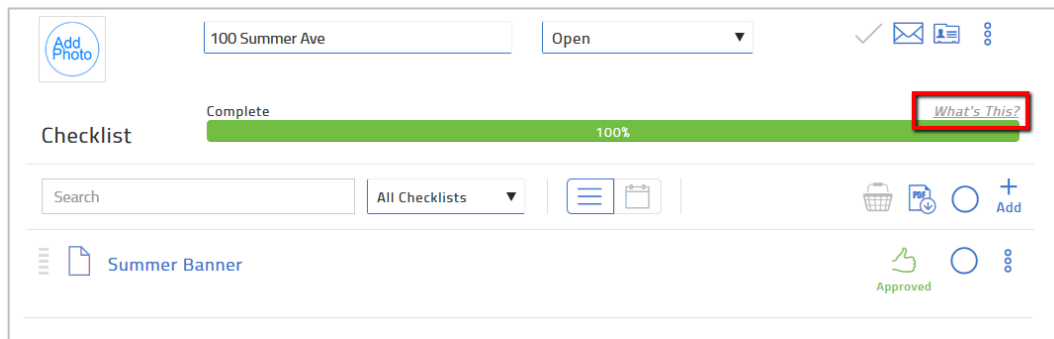

When you are viewing a document within a service order, it will now take advantage of our multi-page doc viewer opposed to cycling through one page at a time.

2. Added 'What's This' explanation to the Transaction progress bar.

This is a pop-up box that explains how the checklist bar is calculated.

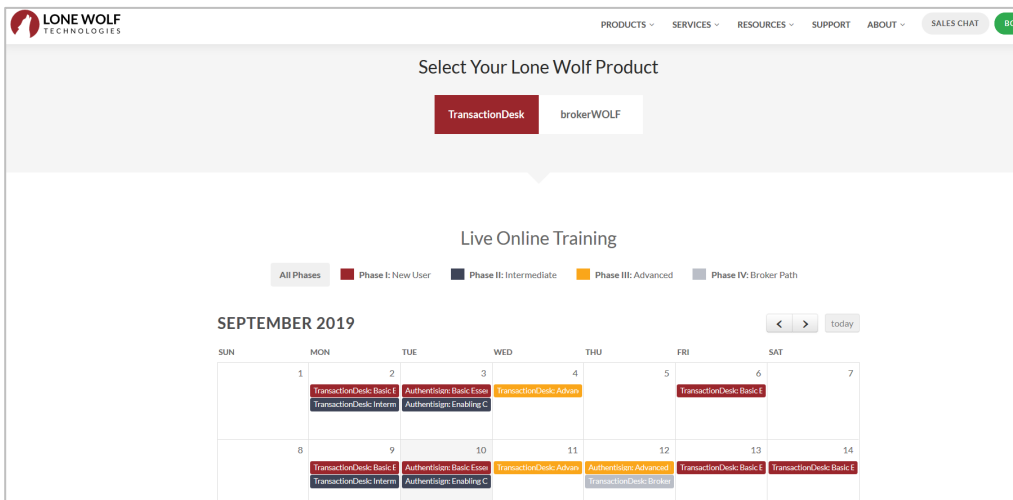

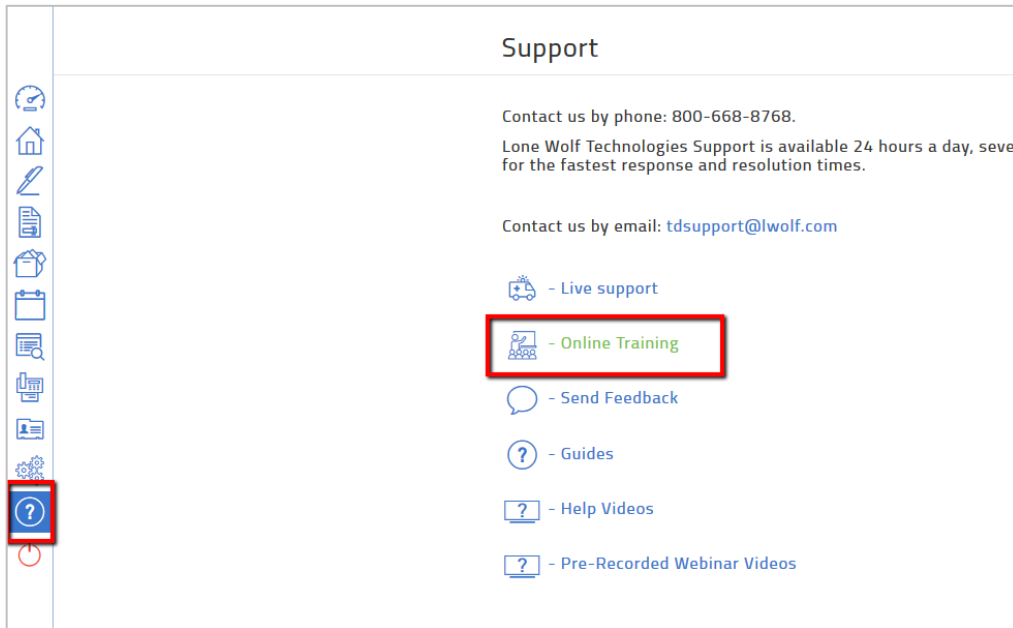

3. Broker File Review – Added an alert to refresh your page as you are reviewing document and new documents have been marked for your review.

When you are in the Document Review section, as new items are marked for review, you will get a message that new items have been added and the ability to reload the page.

The screenshot displays the 'Broker File Review' interface. At the top, a yellow notification banner with a red border states: 'New documents have been submitted for review. Click here to refresh the screen: [Load New Documents](#)'. Below the banner is a search bar with the text 'Search' and a refresh icon. A dropdown menu shows the current filter: 'Lonewolf Technologies, 55 Cambridge Rd London AL 90210'. The main content area lists five documents, each with a dropdown arrow, a date and name, and a count in a blue circle. The documents are: '08-23-2019 | Mr. Dan P Instanet IV' (3), 'dgddgdgdg | Mr. Danny Restrepo III' (2), 'test 2 | Mr. Dan P Instanet IV' (3), 'test 43 | Mr. Dan P Instanet IV' (4), and 'test 555 | Mr. Dan P Instanet IV' (1). Each document entry has three icons on the right: a flag, a house, and a list.

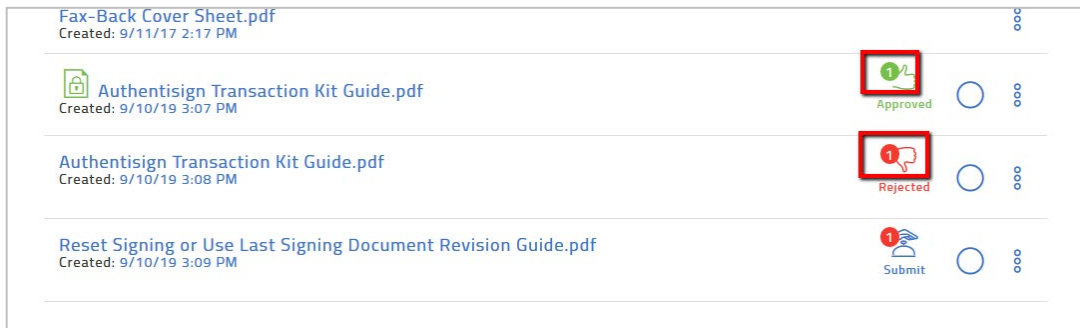

4. Support Training Link – Updated the previous Online Webinar training link to point to our new training sign-up page.

When you go to the support section and select the “Online Training” link it will now lead you to our new training page where users can sign-up for upcoming classes.

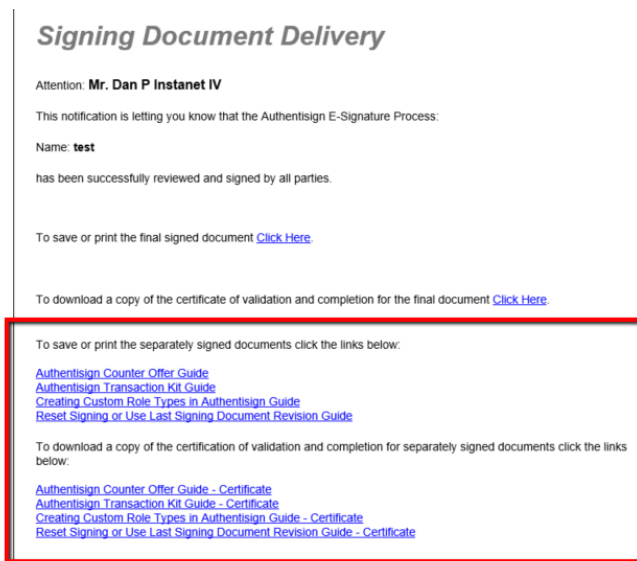

5. Broker File Review - Update note icon once fully approved to match the color of the approved icon.

When a document is approved or rejected the note badge indicator will match the color of the status of the document.

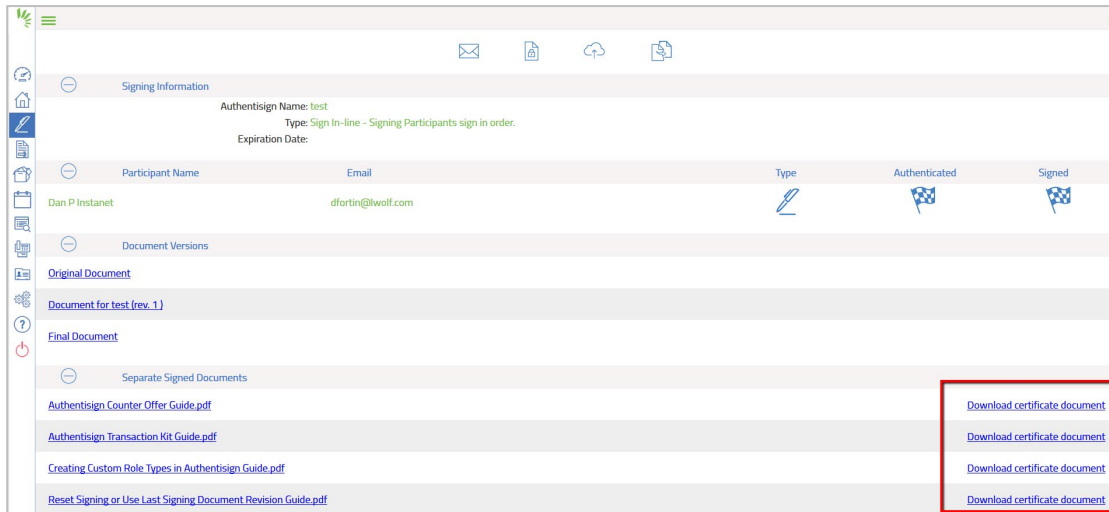

6. Authentisign - Links to Separate Signing Docs and Certificates in Completed Signing Email.

When you receive a final document email there is now a section that allows the user to download the separate signed documents along with their specific certificates instead of just one combined final document and certificate.

7. Authentisign - Separate Signing Certificates per Document in Completed Signature Kit.

When a signing has completed and you navigate to that signing within the application, there is now a section that allows the user to download separate signed document certificates instead of only being able to download the final document certificate.

Participant Name	Email	Type	Authenticated	Signed
Dan P Instanet	dfortin@lwolf.com			

Document Versions
Original Document
Document for test (rev. 1)
Final Document

Separate Signed Documents	
Authentisign Counter Offer Guide.pdf	Download certificate document
Authentisign Transaction Kit Guide.pdf	Download certificate document
Creating Custom Role Types in Authentisign Guide.pdf	Download certificate document
Reset Signing or Use Last Signing Document Revision Guide.pdf	Download certificate document

8. Authentisign - Remove reCaptcha (and solve for simultaneous signing sessions).

We have discontinued the reCaptcha within the signing invites, so users will no longer have to select that they are not a robot or go through the reCaptcha image identification to finish their signing.

In addition to the above enhancements, we have also made the following fixes:

- iOS App and iOS safari – Document Slicer window was not opening on these devices.
- User Login - Error "You do not have access to the required resource" has been resolved. (Was triggered if you took a specific series of actions within the application).
- Staff Review – When you would approve a document set for staff/broker review as a staff review it was displaying the wrong status indicator until you refreshed the page.
- Doc Review Upload – When you were in the broker file review section and used the checklist option and tried to upload a document to an empty placeholder, you would have to upload the document twice before it would transmit over.
- Broker File Review – if a checklist was set to broker and staff review and you were viewing a fully approved document in the broker file review section, those items would show twice with a partially and fully approved status indicator.
- Authentisign Google Drive – When users were trying to search in google drive it was not operating correctly.
- Authentisign – Fixed an issue with the Date Created item in the Authentisign history section when you reset the signing.
